

# Spring '18 - Patch 2 Release Notes

Below is a list of improved features and the issues that have been fixed in the Spring '18 patch:-

---

## Improvements

- We have removed the warning message that confirms when a link is out-of-date - "The URL to the page changed. If needed, please update links"
- We've added a new setting in **Manage App > Governance** that allows you to disable/enable the creation of public links to files.

---

### Public Links to Files

- Allow Users to generate public links to Files (when unchecked, all existing public links will be disabled)
- 

---

## Bugs Fixed

- Cancelling out of the branding panel was not reverting branding settings to their previous state
- User avatar, notification bubble, Launchpad & logo were positioned too high in the header in IE11
- Avatar not displaying correctly when uploaded via Chrome and viewed in IE11
- Alerts from Private and Unlisted Sites not being displayed in listings
- Inserting Emoji's when sharing Content redirecting you to Sites page
- Site cover image not appearing for Unlisted Sites
- Being able to pull in a Long Text Area in a Custom Profile Field
- Default Branding appearing very briefly when updating Segment Branding
- Unable to switch emails back on once turned off in **Manage App > Setup > Email**

- Dropbox Files from Sites still appearing in search after Site storage has been switched to Intranet
  - GDrive batch error email being sent
  - Owner of Unlisted Site unable to see comments on Content from members
  - Additional items visible in Carousel for some users
  - Pagination not working on Site and People tabs in Global Search
- 

## Can't Fix

- Unfortunately we're unable, at this time, to fix a bug that affects how images are displayed when using Safari. We have however found a work around, see the full details here - <https://support.simpplr.com/customer/portal/articles/2946979-how-to-work-around-images-not-appearing-when-using-safari>
