Summer '18

The Summer '18 release delivers an enhanced user experience focused on increased searchability, personalization, and engagement.

The following release notes split major Summer 18 improvements across the two personas of Standard User and Site Owner/Manager.

Highlights

- [People page](#) - The People page is now focused on finding groups of people based on similar attributes.
 - [Profile page](#) - The Profile page is easier to use and has more personality.
 - [Org chart](#) - The new Org Chart allows for a much clearer overview of the organizational structure.
-

Standard Users

The following notes cover the major improvements for Standard Users.

People

Search People using powerful filters

People page

The redesign of the People page was built around one core principle: to quickly find groups of people based on a set of criteria. To achieve this, we refocused the user experience around searchability by eliminating Tiles and replacing them with a set of filters that allow users to select various groups of people.

You can now also connect with colleagues more quickly than ever due to the increased visibility of their contact details in the listings.

The new filters allow you to sort by:

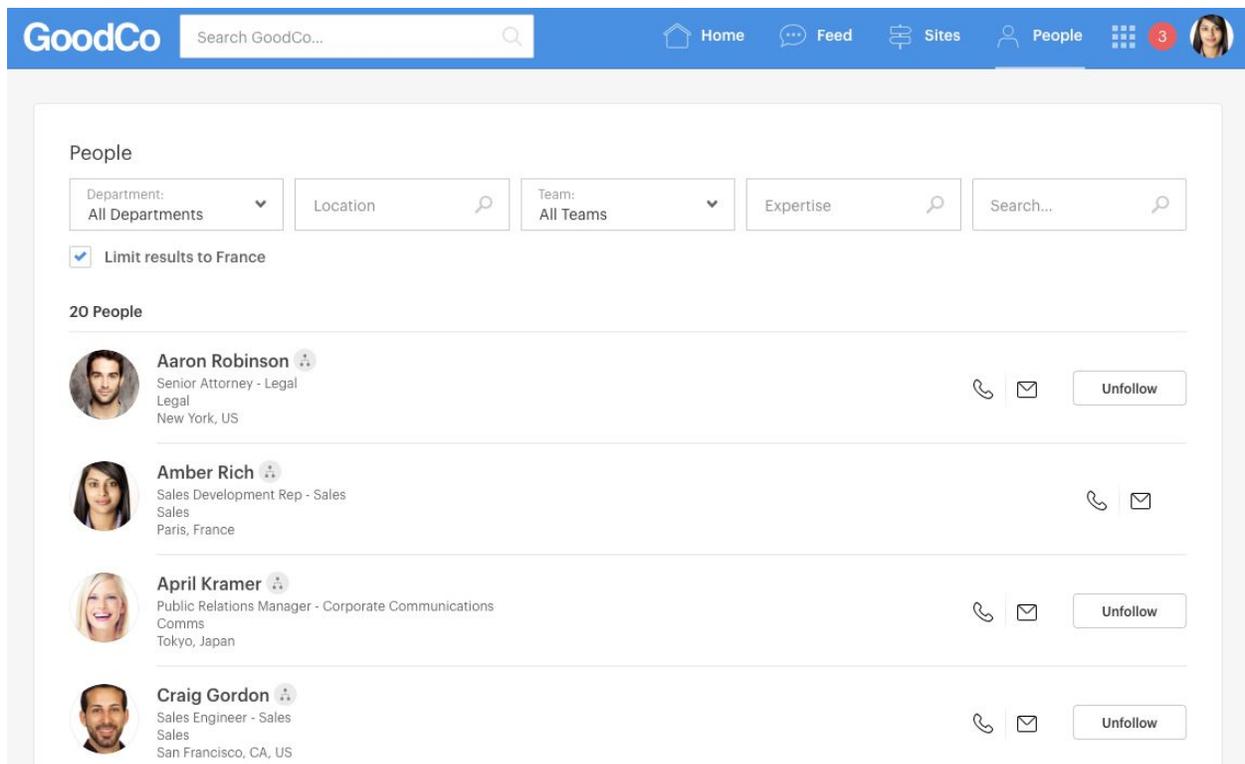

- Department
- Location
- Custom People Category
- Expertise
- Search (This is a text field where you can add extra terms to the filter, such as if you a name, phone number, email etc...)

As well as removing the Tiles from the People page we have also removed the number count for Employees, Departments and Locations.

- The overall number of employees is displayed above the list of employees before any filters have been in place.
- The number of Departments and Locations can be ascertained from the options in the respective dropdowns.
- As the list is filtered the number of employees will be updated to reflect the results shown, this allows you to quickly find out how many employees are working in a specific Department or Location.

Note: If you have Segments enabled it is also possible to limit your search to people who have the same Segment field as you:-

- For example in the screenshot below the Segments are made using Country, so the employee can limit the search to their own country, in this case France.

The screenshot shows the GoodCo People page interface. At the top, there is a blue navigation bar with the GoodCo logo, a search bar, and navigation icons for Home, Feed, Sites, and People. Below the navigation bar, the page is titled "People" and features several search filters: "Department: All Departments", "Location", "Team: All Teams", "Expertise", and a "Search..." field. A checkbox labeled "Limit results to France" is checked. Below the filters, it displays "20 People" and a list of four employee profiles. Each profile includes a profile picture, name, title, location, and contact options (phone and email). The "Unfollow" button is visible for each profile.

Name	Title	Location	Contact Options	Action
Aaron Robinson	Senior Attorney - Legal	New York, US	Phone, Email	Unfollow
Amber Rich	Sales Development Rep - Sales	Paris, France	Phone, Email	
April Kramer	Public Relations Manager - Corporate Communications	Tokyo, Japan	Phone, Email	Unfollow
Craig Gordon	Sales Engineer - Sales	San Francisco, CA, US	Phone, Email	Unfollow

Mobile

We've extended the increased People features to the mobile (web & hybrid) app. To increase the visibility of our new features, we added People to the bottom menu and moved Favorites into the User Menu.

Search and contact colleagues faster

Profile page

We've always believed that finding your team members and connecting with them quickly is an integral part of networking and productivity. Nevertheless, we wanted to make it easier to quickly find and contact team members through employee-published content or the enhanced org chart.

We reduced cognitive overload and maximized usability of the Profile Page by removing the tab navigation which has resulted in the following being removed:

- Files
 - Files associated with Sites can still be accessed via the Global Search
 - All files that you have access to (including any files stored in one of our integrated file providers) are available to attach to Content and Feed Posts
- Feed
 - The Feed can be searched from the Feed or through the Global Search
- Must Reads
 - Must Reads are now accessible from the User Menu

The goal of this is to drive users to the main functions: contact, search, and personalization.

New features added:

- Find the Org Chart in a click (of an icon)
- Expanded the contact details
- Integrated video conferencing links (Skype, Zoom) to automatically open the app and connect to a call
- Added Published Content list that filters and displays all Content published by the employee
- New cover image that allows for personalization and expression:

- Recommended image size of: 746px x 304px
- Can be added by the employee or by an App Manager

Engage users with new Profile Completeness Meter

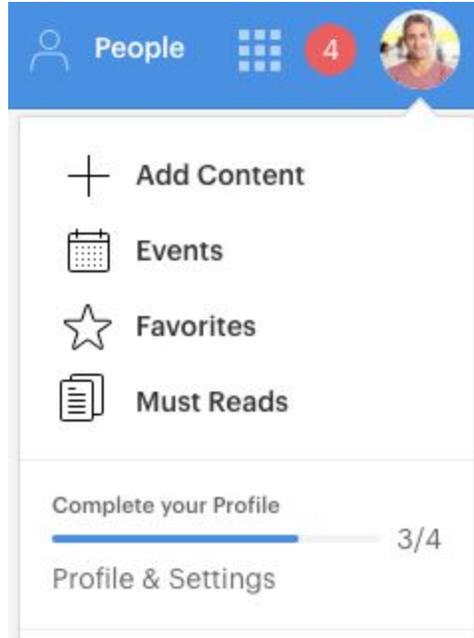

In addition to enhancing the search function, we thought about ways to increase employee engagement.

The new Profile Completeness meter is a progress bar that encourages employees to add richer data and imagery to their profile. The more profile data, the better the search. To continually engage employees, we made the 'Complete Your Profile' section sticky under the User Menu that tracks completion.

The 'Complete your Profile' Tile will appear on the employees Profile page until they have added the following:

1. Profile picture
2. Cover image
3. Phone number
4. 'About' text

Improved Org Chart accessibility and usability

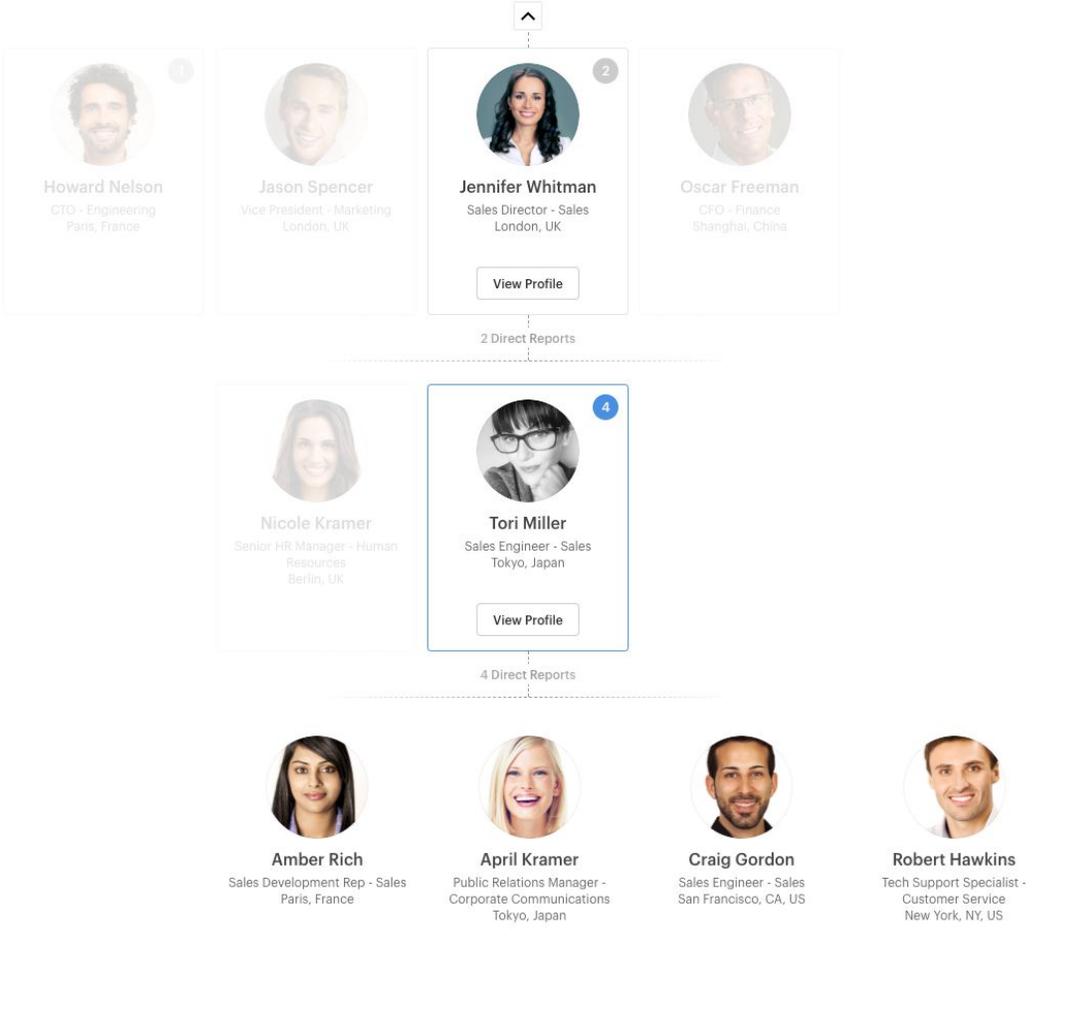

We wanted to give a clearer understanding of the relationships between people within the organization. Previously, the Org Chart was difficult to find and was limited in function because it was limited to displaying only direct managers and reports. Our improved Org Chart helps employees better understand the organizational structure through increased navigational functions.

New features added:

- An Org Chart tooltip icon that appears as you hover over a colleague's avatar
- Directional navigation throughout the Org Chart hierarchy that displays all direct reports per selected manager

Search for a Person...

More Improvements

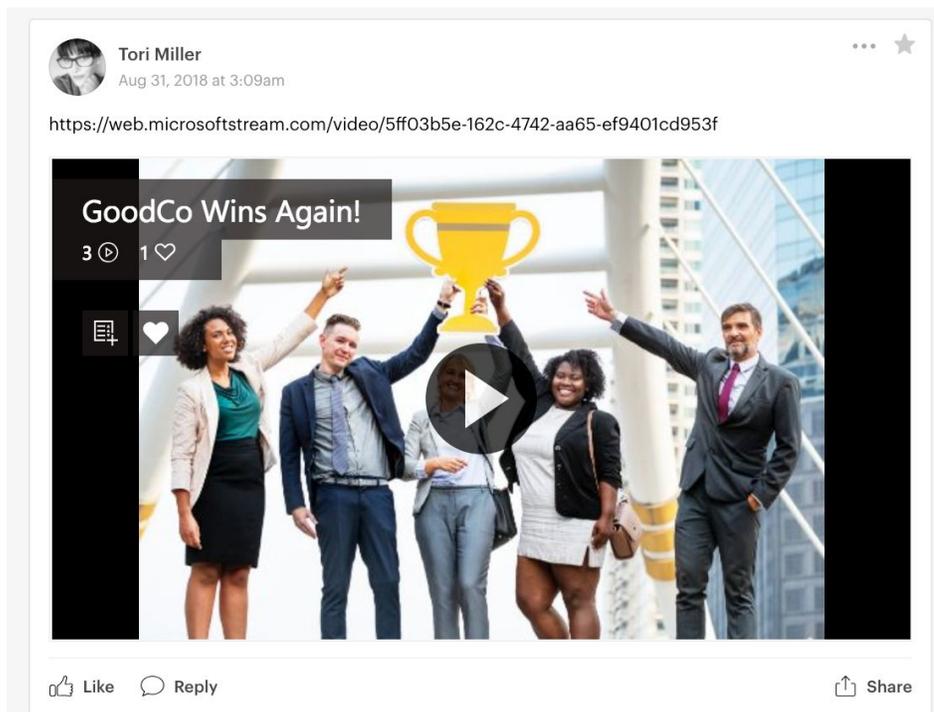

Video integrations with Microsoft 365 and Microsoft Stream

In conjunction with the new integrations with Microsoft SharePoint and OneDrive (See our Summer 18 SharePoint and OneDrive documents for details) we have also now integrated Microsoft Office 365 and Microsoft Stream videos.

To watch the videos, users will need to be logged into the MS accounts in the same browser that they are using the app in.

They can now be embedded into:

- The Feed
- Content

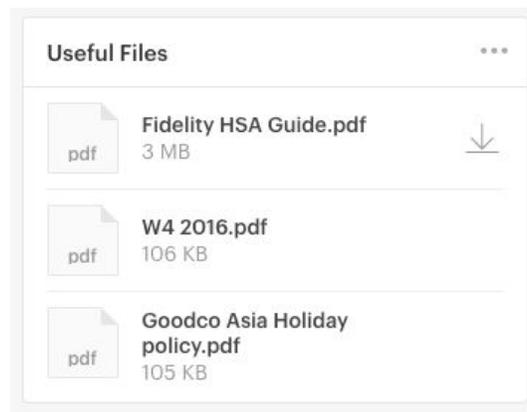

And added to the following using the share URL:

- Albums
- The Carousel
- Video Tiles
- Links Tiles

Important Note: Due to the limitations of Microsoft's API, when adding MS Stream or Office 365 videos with a URL (rather than embed) to Carousel and Tiles, we are unable to fetch the video thumbnail, title or description.

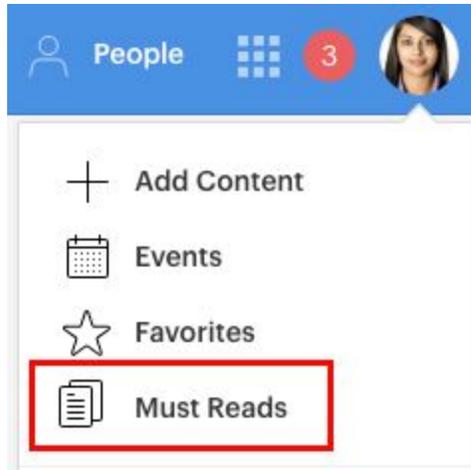

Download directly from Files Tiles

Quick access to your organization's Files is one of the major benefits of a good Intranet. You can now directly download buttons to the File Tile, prompting a direct download without first opening up the file detail page.

Must Reads

Only the most important Content in an organization will be marked as Must Read, so we wanted to make sure that it was easy to find. We've moved Must Read Content into the User Menu, with Unread Content grouped at the top.

Feed Updates

Pasting an image into Feed

You can now paste images directly from your clipboard into a Post as an attachment.

Sharing Albums in Feed

To enhance the visual aesthetics, we've made Albums more engaging when shared to the Feed in a grid layout.

Font Change

As part of our ongoing efforts to improve the aesthetics of the app, the default font has now been changed from Museo to Graphik.

Although this was mainly a visual decision it does have the added benefit that many special characters will now render in the correct font when they previously wouldn't, providing better readability.

Site Owners/Managers

The following notes cover major improvements for Site Owners/Managers.

Links to Private Site's Content

To improve the experience of interacting with Sites and Content we have modified the way that links to Content held within Private Sites works. Users will now be sent to the 'Request Access to Site' page allowing them the chance to ask to join the Site and access the Content.
